

EXABONE®

HA/TCP

Bone Graft Substitute

BIOMIMETIC | POROSITY | STRENGTH | COHESION

Exabone GmbH is a Swiss based biotechnology leader that develops, manufactures and distributes innovative biomaterials across the globe.

Capitalising on over 30 years experience in global markets our products are innovative, easy to use and proven the world over.

Engineered biomimetic architecture

EXABONE HA/TCP is an advanced synthetic biphasic biomaterial with optimised characteristics, matching the internal structure of healthy human cancellous bone.

Advanced manufacturing technology leads to unique specifications

An ideal porosity to strength ratio for optimised handling with high integral strength and structural cohesion.

BIOMIMETIC

POROSITY

STRENGTH

COHESION

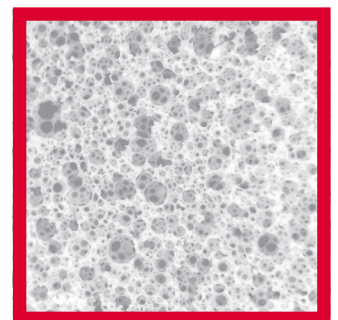

Strength: 5.5 to 7.5 MPa

Porosity: 81%

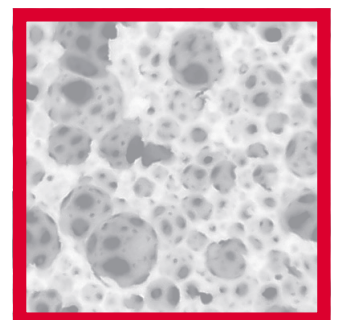

Pore Size: 200 to 800 um

Can be shaped to fit the defect

Highly porous structure

Completely interconnected

Reliability & consistent performance

The full porosity (interconnection & microporosity) combined with its elegant trabecular architecture favours rapid and homogeneous fluid absorption.

EXABONE HA/TCP internal structure and biphasic composition creates a highly osteoconductive environment supporting bone regeneration with a controlled resorption.

The healing process starts by rapid osteoconduction from the viable bone at the implant interface filling all the available pore spaces. The bone matures to woven bone and consolidates followed by implant resorption.

Efficacy of HA/TCP biphasic bone substitute biomaterial is supported by a long clinical history, thousands of related publications and published clinical studies.

Intended use

EXABONE HA/TCP is a synthetic bone substitute intended to fill traumatically or surgically created bone defects that are not intrinsic to the stability of the bony structure.

Indications

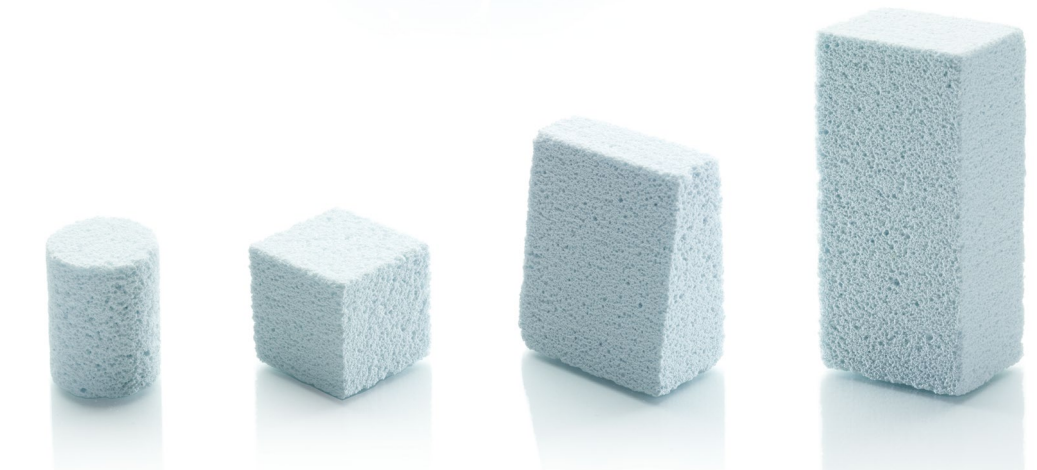

EXABONE HA/TCP is indicated for treating defects of the long bones and extremities.

EXABONE HA/TCP granules may also be used in spine surgery (spondylodesis).

EXABONE HA/TCP can be soaked with blood and/or combined with autologous bone prior to application.

Granules

Discs/Blocks/Wedges

A full range ready to use

Available in a variety of shapes and sizes adapted to a wide range of surgical indications in unlimited quantities.

EXABONE HA/TCP is gamma sterilized and ready to use, with a shelf life of five years.
